

These instructions are on how to use OneSearch: Curriculum Builder to add a reading list of articles from Library databases and open access sources to your Blackboard course.

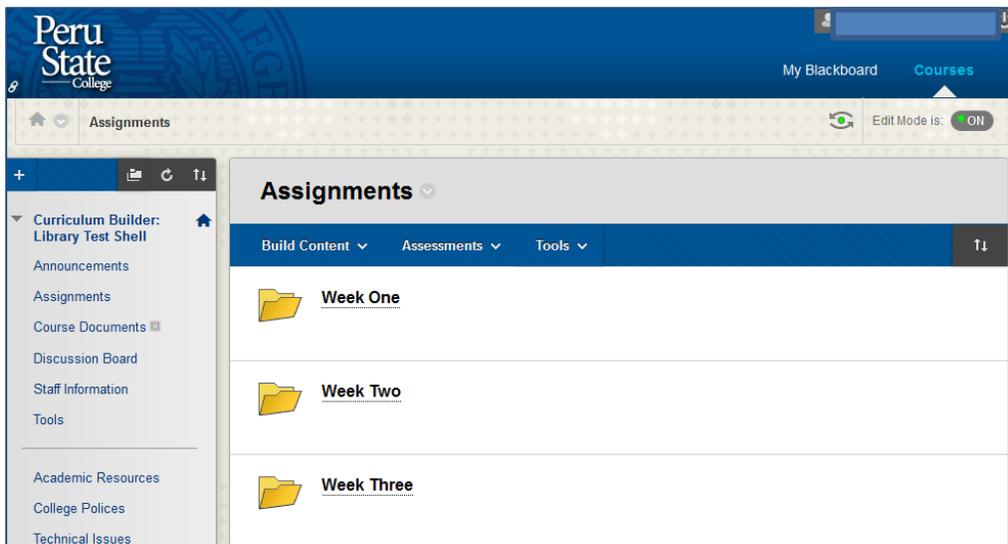

Before we start, you should know that LexisNexis, ebrary (one of our two eBook providers), and ProQuest databases are not searchable in Curriculum Builder because of agreements (or lack of) between them and EBSCO.

If you wish to use eBooks, inform your students not to download them but read them online. eBooks are similar to print books in regards that if a student checks out the eBook no one else can access it until it is returned.

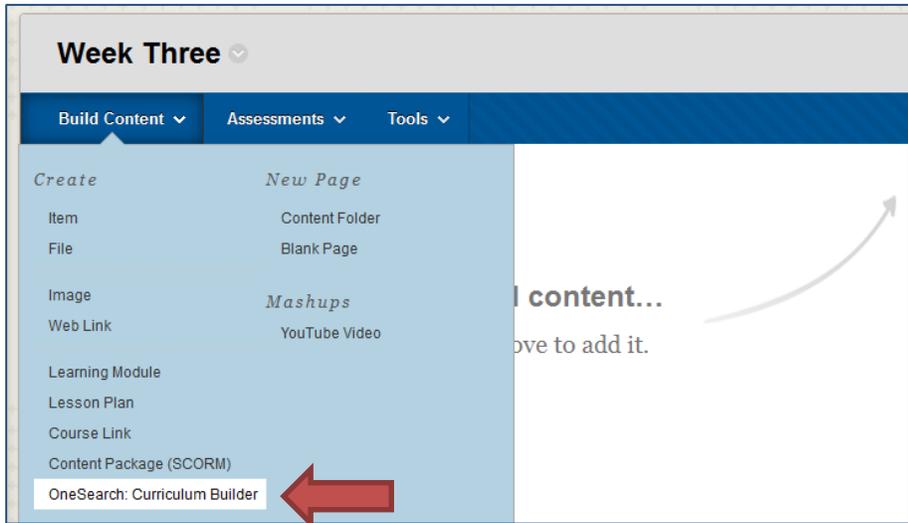

Reading lists that are not accessed by you or a student in two years are automatically deleted from the system. This is a setting controlled by EBSCO so, unfortunately, the Library cannot override it.

Adding articles and eBooks to a reading list

1. Access your course in Blackboard and the “Assignments” section.
2. Select the week for the reading list.

3. Click on “Build Content” > “OneSearch: Curriculum Builder”

4. Give your reading list a name. There are additional options such as description that you can also provide.

ATTACHMENTS

*If you select a file you do not want, click **Do Not Attach** to remove the attachment from the content item. The file itself is not deleted.*

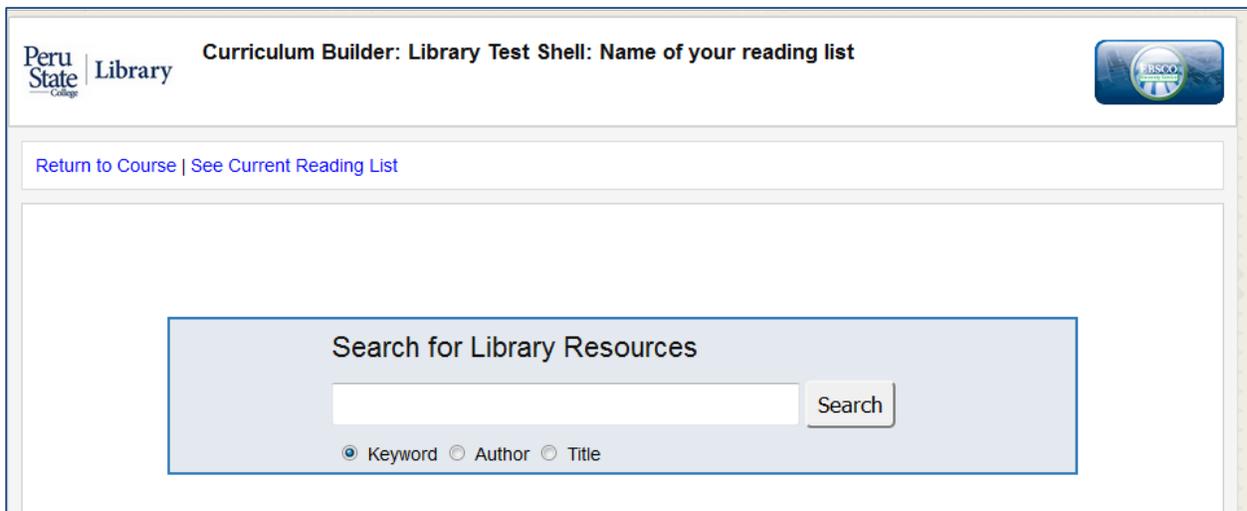

Attach File

OPTIONS

- Click on the name of your reading list to search for resources to add to the list.

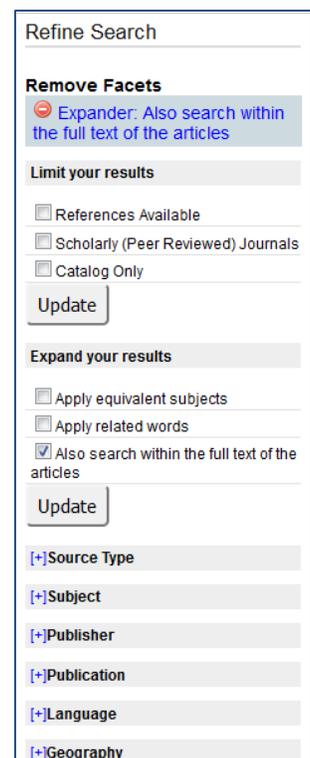

- Type in the search box your search terms and select whether to search by keyword, author, or title. At the moment, EBSCO doesn't provide subject searches nor advance searches for Curriculum Builder.

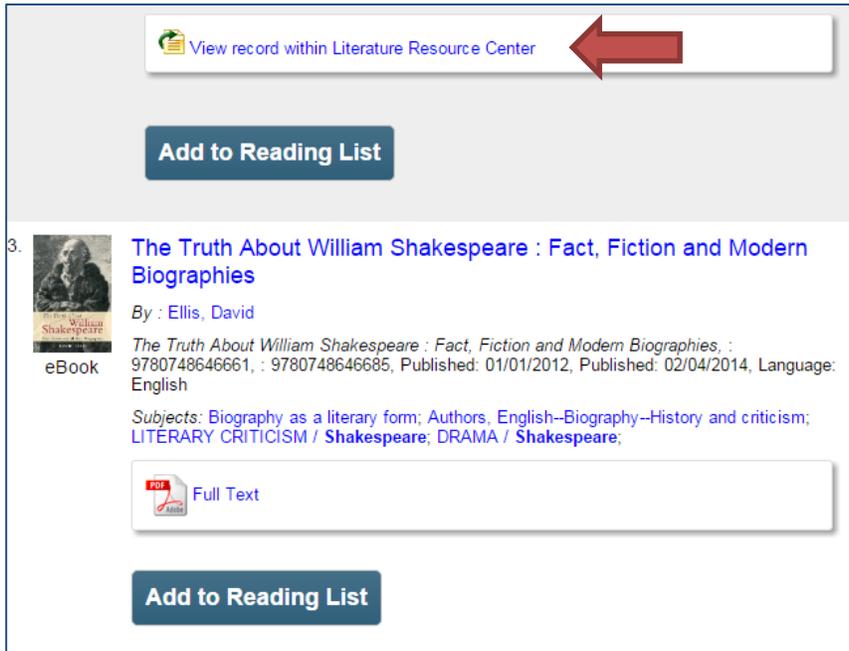

- On the results page, you may refine your search by adding limiters and expanders.

Note: The expander to "Also search within the full text of the articles" by default is turned on.

You may not want to use the "Catalog Only" option since this will limit your results to only physical items in the Library that some of your students may not be able to access.

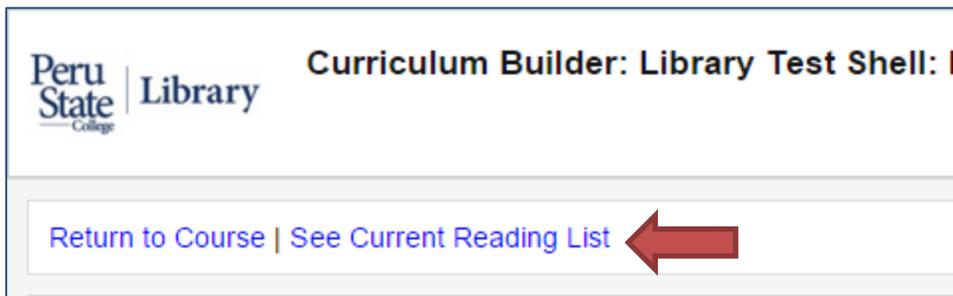

8. When you find a resource that you want your students to read, check to confirm that the full text is available especially if the link is a view record.

The screenshot shows a library record for the eBook "The Truth About William Shakespeare : Fact, Fiction and Modern Biographies" by David Ellis. At the top, there is a link "View record within Literature Resource Center" with a red arrow pointing to it. Below the link is a blue "Add to Reading List" button. The record details include the title, author, ISBNs, publication dates, and language. A "Full Text" link with a PDF icon is also visible, along with another "Add to Reading List" button at the bottom.

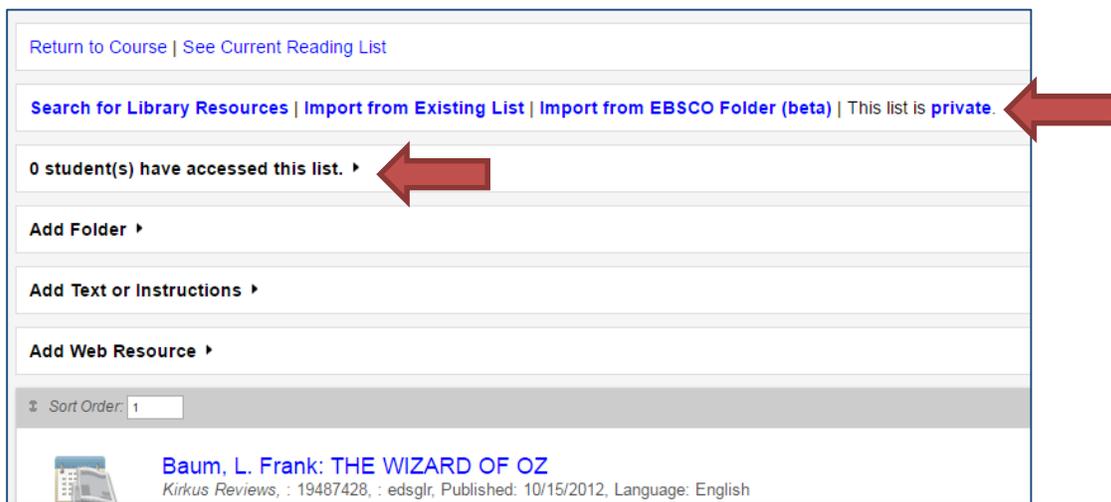

9. If the full text is available, click on the “Add to Reading List” button.
- a. You may click the button again, which is now red and reads “Remove from Reading List,” to remove the resource from your list.
10. Continue to add more resources to your reading list by browsing the results or by additional searches.
11. When finished, you may click the “See Current Reading List” at the top.

The screenshot shows the top of a library interface. On the left is the "Peru State College Library" logo. To the right is the text "Curriculum Builder: Library Test Shell: N". Below this, there is a navigation bar with the links "Return to Course" and "See Current Reading List", with a red arrow pointing to the latter.

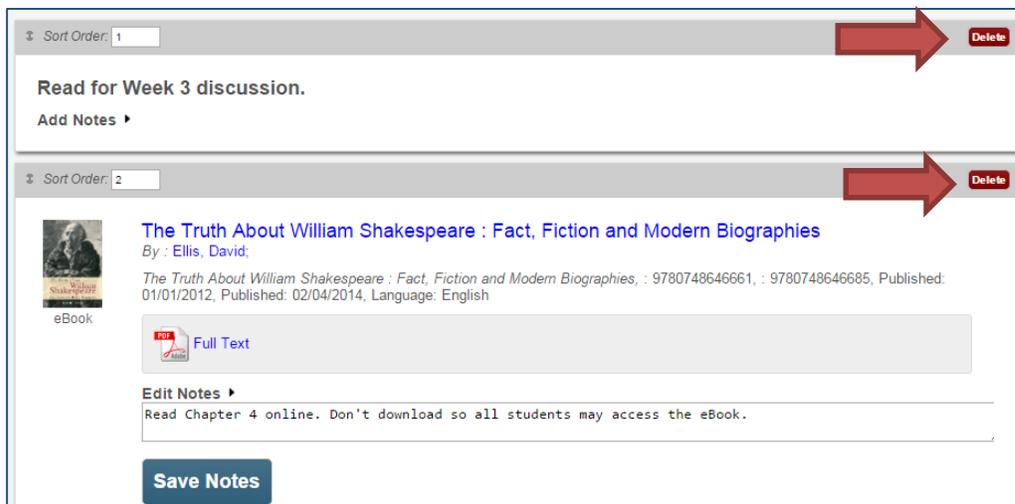

12. In your reading list, you have the option to:

- a. Search for Library Resources - to add more resources to your list
- b. Import from Existing List - You may import one of your lists from another course or import a list made public by any professor. *(This will be explained further below.)*
- c. Import from EBSCO Folder (beta) - *At this time, I am uncertain how this works.*
- d. Keep your list private or make it public for others to use.
- e. You can also view a list of the students that have accessed the readings. It will list the names of your students that have looked at the readings. It won't indicate if they have read them or not.

13. You can also add a folder, add instructions, add web resources, sort the order of the resources, and add individual notes to specific items.

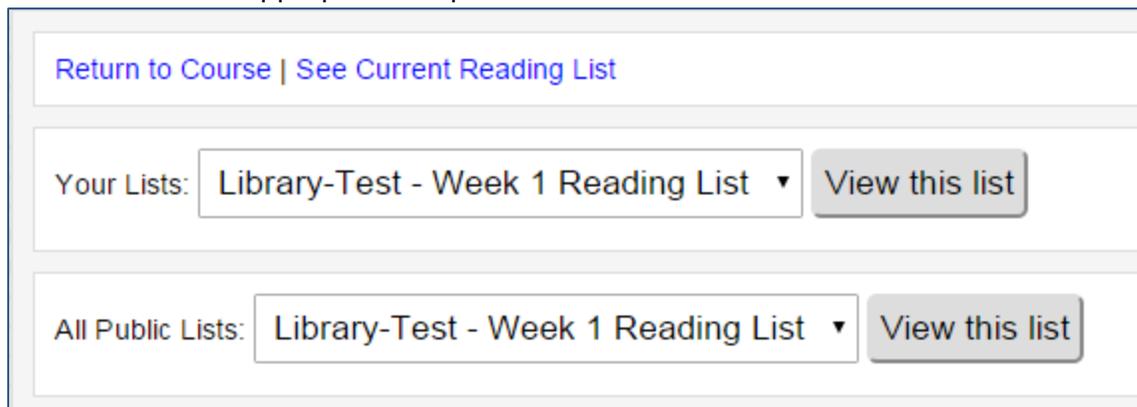

Red delete buttons are on each item so you may remove any unwanted resources or text.

Import from Existing List

You have the option to import from your lists or from all the public lists.

1. Find the list in the appropriate drop down box. Then select the “View this list” button.

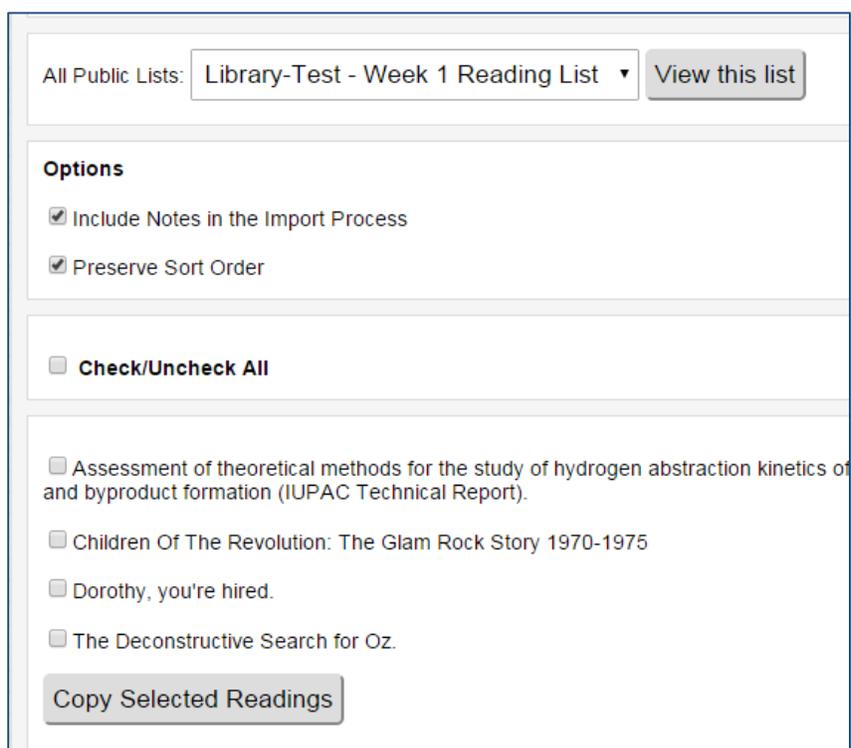

Return to Course | See Current Reading List

Your Lists: Library-Test - Week 1 Reading List ▾ View this list

All Public Lists: Library-Test - Week 1 Reading List ▾ View this list

2. You then get to decide what information you want to import from the list.
 - a. Include Notes in the Import Process - is checked by default
 - b. Preserve Sort Order - is checked by default
 - c. Check/Uncheck All - select to import all the resources or to unselect all
 - d. Individually check only the resources you wish to import.

All Public Lists: Library-Test - Week 1 Reading List ▾ View this list

Options

Include Notes in the Import Process

Preserve Sort Order

Check/Uncheck All

Assessment of theoretical methods for the study of hydrogen abstraction kinetics of and byproduct formation (IUPAC Technical Report).

Children Of The Revolution: The Glam Rock Story 1970-1975

Dorothy, you're hired.

The Deconstructive Search for Oz.

Copy Selected Readings

3. Click “Copy Selected Readings” to import.

Student View

The reading list will appear like this for students:

Read for Week 3 discussion.
